

CHARACTERISTICS OF COOPERATION WITH J.S.C "SNIIP SYSTEMATOM"

In 2000, SEBIM Company after preliminary audit, chose J.S.C "SNIIP SYSTEMATOM" as a Partner and as a supplier of control units for valves, and won international tender for delivery to Russia and Ukraine of valves produced by SEBIM Company in combination with control units produced by "SNIIP SYSTEMATOM".

During the period from beginning of 2000, several batches of SEBIM valves with control units BUP-J5R, developed and manufactured by "SNIIP SYSTEMATOM" during rather short periods of time, have been delivered to various NPPs in Russia and Ukraine.

Perspective technical solutions used in control units permit to realize their rather simple adaptation to different projects of NPPs with reactor VVER 440, VVER 1000 and RBMK.

The commissioning works already performed and gained operational experience demonstrate sufficiently high parameters of these control units BUP-J5R, and influence on intention of SEBIM Company to continue the cooperation with J.S.C. "SNIIP SYSTEMATOM".
